IDENTITY
SOLUTIONS

Features and Benefits

ID-Passport

• Searching for seals, logos, and other patterns that should be present in specific areas of a document.

• Searching patterns that appear under ultraviolet (UV), infrared (IR) light as well as visible light.

• Checking for patterns and features that might be present on a fake document but not on a legitimate one – under visible, UV, and IR light.

• Checking for evidence of tampering in the 3M® confirm laminate.

• Enhances ID-Suite for more-advanced security testing of many ICAO documents.

Documetrics™ Databases

Customize Your Document Authentication Needs with Scalable and Extensible Databases

L-1 Identity Solutions Inc., offers a palatte of database options that allow our customers to perform many tasks including verify passports and e-passports, validate driver's licenses, compare user identity against national and international security databases, help law enforcement agencies manage booking and release of suspects more efficiently, and provide resources to combat identity fraud and theft. Collectively, these Documetrics databases form the back- end engine by which our award-winning ID-Suite and other solutions are run.

ID-Passport

ID-Passport is an extensive electronic database of travel and identity document features for use with the Viisage ID-Suite platform. This unique database includes forensic information on passports, visas, U.S. Immigration cards, national IDs, and more.

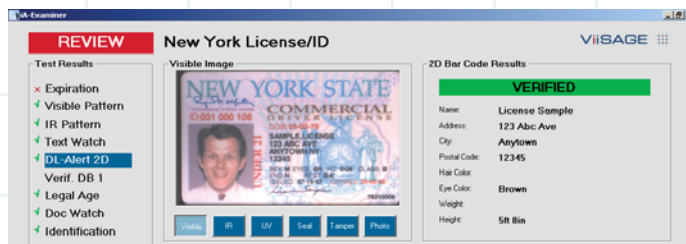

ID-Passport enables the ID-Suite platform to recognize and authenticate more international travel and identity documents than any other document reader/authenticator on the market today.

ID-License

ID-License Is a comprehensive electronic database of North American ID templates for automated authentication of drivers' licenses, military IDs and other identity documents.

In tandem with Secure-It, ID-License works to

Global-ID

Global-ID is an enhancement to ID-Suite™ that broadens its ability to test document security features in-depth. Once installed, it works automatically behind the scenes, with no need for the operator to take any extra steps.

Advanced security testing with Global-ID can also verify the validity of non-ICAO standard documents. Security tests can range from searching for seals and logos that should be present on a valid document, searching for visible patterns under ultraviolet and infrared light, and checking for evidence of tampering in the 3M Confirm laminate to name but a few advantages of Global-ID.

Reference DB

The Reference Database (DB) provides an addtional line of validation or disqualification of questionable identity documents. Information about the identification documents provides additional options for authenticating the documents using visual inspection. This type of inspection is normally performed as part of a secondary inspection process for documents that have failed one or more of the automated authentication tests.

By maintaing a variety of custom reference databases readily available our

Features and Benefits

ID-License

• Magnetic stripe and bar coded data processing for USA and Canadian licenses and ID Cards

• Automatic age calculation, legal age testing, and expiration testing

• Records document transactions in a local or networked relational database
